

LEADING THE WAY

BASF Construction Chemicals Asia Pacific has established a global reputation as a leading supplier of chemical systems and formulations in the construction industry.

THE EMACO NANOCRETE RANGE ILLUSTRATES BASF CONSTRUCTION CHEMICALS' COMMITMENT TO FURTHERING THE COMPANY'S IMPRESSIVE SELECTION OF PRODUCTS AND INNOVATIVE PRACTICES.

Headquartered in Shanghai, this company operates sales, warehousing and manufacturing facilities in most Australian states and New Zealand. Committed to understanding business at all levels, BASF Construction Chemicals provide customers with innovative and tailored solutions aimed at meeting every individual need.

Functional in most facets of the construction industry, the company offers high-quality products, state of the art technologies and services which promote product longevity, efficient production processes and less energy consumption.

With a strong passion for remaining at the forefront of their field, BASF Construction Chemicals has built a reputation for providing expert technological advice due to their capable research and development team. In Australia and New Zealand, BASF Construction Chemicals uses its knowledge and experience in tailoring products for local conditions and providing solutions to local problems.

In November 2008, BASF Construction Chemicals launched a state-of-the-art Emaco Nanocrete range of specialist concrete repair products in Australia. The Emaco Nanocrete range was developed with a focus on combining effective long-term performance that meets the needs of even the most demanding applications.

Each of the products in the range represent the culmination of years of intensive research, development and testing, setting a

new standard in concrete repair technology. Specifically designed to meet industry demands for high durability, low shrinkage, ease of application and improved safety, the Emaco Nanocrete range represents the latest in concrete repair materials technology. By using the concept of applied nanotechnology, BASF has been able to develop a range of repair mortars with exceptional performance properties, including: improved bond strengths, tensile strengths, density, impermeability and thixotropy, together with reduced shrinkage and improved compatibility with concrete. In addition, the range of Emaco Nanocrete is formulated to enable quicker and easier application and finishing – reducing application problems and reducing cost.

The Emaco Nanocrete range illustrates BASF Construction Chemicals' commitment to furthering the company's impressive selection of products and innovative practices.

Along with contributing comprehensively to the construction industry, BASF are also strongly committed to environmental protection and aware of their social responsibility. Through their three pillar approach to sustainability, the company contributes to a better quality of life for future generations. The company takes a proactive approach to economic, environmental and corporate social responsibility throughout their entire network, seeing sustainability as a long-term competitive advantage and crucial element for future success.
